

## CONTENTS

<b>CHAPTER 1. INTRODUCTION . . . . .</b>	<b>1</b>
1-1 Optimization problems . . . . .	1
1-2 Programming problems . . . . .	1
1-3 An example . . . . .	2
1-4 Linear programming . . . . .	4
1-5 The transportation problem; another example . . . . .	7
1-6 Simple graphical examples . . . . .	8
1-7 Some exceptional cases . . . . .	13
1-8 The simplex method . . . . .	17
1-9 Brief historical sketch . . . . .	20
1-10 The road ahead . . . . .	21
<b>CHAPTER 2. MATHEMATICAL BACKGROUND . . . . .</b>	<b>24</b>
2-1 Matrices . . . . .	24
2-2 Special matrices . . . . .	26
2-3 Partitioning of matrices . . . . .	28
2-4 Determinants . . . . .	30
2-5 The matrix inverse . . . . .	34
2-6 Computation of the inverse by partitioning . . . . .	35
2-7 Power series expansion of $(I - A)^{-1}$ . . . . .	36
2-8 Vectors and euclidean spaces . . . . .	37
2-9 Linear dependence . . . . .	40
2-10 Bases . . . . .	43
2-11 Number of vectors in a basis for $E^n$ . . . . .	45
2-12 Vector spaces and subspaces . . . . .	46
2-13 Rank . . . . .	47
2-14 Product form of the inverse . . . . .	48
2-15 Simultaneous linear equations . . . . .	50
2-16 Basic solutions . . . . .	54
2-17 Linear transformations . . . . .	55
2-18 Point sets . . . . .	55
2-19 Lines and hyperplanes . . . . .	57
2-20 Convex sets . . . . .	58
2-21 Convex sets and hyperplanes . . . . .	61
2-22 Convex cones . . . . .	65
<b>CHAPTER 3. THEORY OF THE SIMPLEX METHOD . . . . .</b>	<b>71</b>
3-1 Restatement of the problem . . . . .	71
3-2 Slack and surplus variables . . . . .	72
3-3 Preliminary remarks on the theory of the simplex method . . . . .	76
3-4 Reduction of any feasible solution to a basic feasible solution . . . . .	80
3-5 Some definitions and notations . . . . .	84
3-6 Improving a basic feasible solution . . . . .	87
3-7 Unbounded solutions . . . . .	93
3-8 Optimality conditions . . . . .	95

3-9 Alternative optima . . . . .	99
3-10 Extreme points and basic feasible solutions . . . . .	100
<b>CHAPTER 4. DETAILED DEVELOPMENT AND COMPUTATIONAL ASPECTS OF THE SIMPLEX METHOD . . . . .</b>	<b>108</b>
4-1 The simplex method . . . . .	108
4-2 Selection of the vector to enter the basis . . . . .	111
4-3 Degeneracy and breaking ties . . . . .	113
4-4 Further development of the transformation formulas . . . . .	114
4-5 The initial basic feasible solution—artificial variables . . . . .	116
4-6 Inconsistency and redundancy . . . . .	121
4-7 Tableau format for simplex computations . . . . .	124
4-8 Use of the tableau format . . . . .	127
4-9 Conversion of a minimization problem to a maximization problem . . . . .	130
4-10 Review of the simplex method . . . . .	132
4-11 Illustrative examples . . . . .	134
<b>CHAPTER 5. FURTHER DISCUSSION OF THE SIMPLEX METHOD . . . . .</b>	<b>149</b>
5-1 The two-phase method for artificial variables . . . . .	149
5-2 Phase I . . . . .	150
5-3 Phase II . . . . .	151
5-4 Numerical examples of the two-phase method . . . . .	154
5-5 Requirements space . . . . .	158
5-6 Solutions space . . . . .	162
5-7 Determination of all optimal solutions . . . . .	166
5-8 Unrestricted variables . . . . .	168
<b>CHAPTER 6. RESOLUTION OF THE DEGENERACY PROBLEM . . . . .</b>	<b>174</b>
6-1 Introduction . . . . .	174
6-2 Charnes' perturbation method . . . . .	175
6-3 Selecting the vector to be removed . . . . .	177
6-4 Order of vectors in $b(\epsilon)$ . . . . .	181
6-5 Use of perturbation technique with simplex tableau format . . . . .	181
6-6 Geometrical interpretation . . . . .	182
6-7 The generalized linear programming problem . . . . .	183
6-8 The generalized simplex method . . . . .	184
6-9 Examples pertaining to degeneracy . . . . .	187
6-10 An example of cycling . . . . .	190
<b>CHAPTER 7. THE REVISED SIMPLEX METHOD . . . . .</b>	<b>197</b>
7-1 Introduction . . . . .	197
7-2 Revised simplex method: Standard Form I . . . . .	197
7-3 Computational procedure for Standard Form I . . . . .	201
7-4 Revised simplex method: Standard Form II . . . . .	205
7-5 Computational procedure for Standard Form II . . . . .	207
7-6 Initial identity matrix for Phase I . . . . .	210
7-7 An example . . . . .	211

7-8 Comparison of the simplex and revised simplex methods . . . . .	215
7-9 The product form of the inverse . . . . .	217
<b>CHAPTER 8. DUALITY THEORY AND ITS RAMIFICATIONS . . . . .</b>	<b>221</b>
8-1 Alternative formulations of linear programming problems . . . . .	221
8-2 Dual linear programming problems . . . . .	222
8-3 Fundamental properties of dual problems . . . . .	228
8-4 Other formulations of dual problems . . . . .	233
8-5 Complementary slackness . . . . .	239
8-6 Unbounded solution in the primal . . . . .	241
8-7 Dual simplex algorithm . . . . .	242
8-8 Alternative derivation of the dual simplex algorithm . . . . .	247
8-9 Initial solution for dual simplex algorithm . . . . .	252
8-10 The dual simplex algorithm; an example . . . . .	253
8-11 A geometric interpretation . . . . .	255
8-12 A primal-dual algorithm . . . . .	257
8-13 The primal-dual algorithm; an example . . . . .	263
<b>CHAPTER 9. TRANSPORTATION PROBLEMS . . . . .</b>	<b>273</b>
9-1 Introduction . . . . .	273
9-2 Properties of the matrix $A$ . . . . .	275
9-3 The simplex method and transportation problems . . . . .	278
9-4 Simplifications resulting from all $y_{ij}^{\alpha\beta} = \pm 1$ or 0 . . . . .	280
9-5 The transportation-problem tableau . . . . .	284
9-6 Bases in the transportation tableau . . . . .	288
9-7 The stepping-stone algorithm . . . . .	291
9-8 An example . . . . .	294
9-9 Degeneracy and the transportation tableau . . . . .	299
9-10 Determination of an initial basic feasible solution . . . . .	304
9-11 Alternative procedure for computing $z_{ij} - c_{ij}$ ; duality . . . . .	309
9-12 Inequalities in the constraints of a transportation problem . . . . .	312
9-13 Generalized transportation problems . . . . .	314
9-14 Solving the generalized transportation problem . . . . .	316
9-15 Generalized transportation problem; an example . . . . .	318
<b>CHAPTER 10. NETWORK FLOWS . . . . .</b>	<b>331</b>
10-1 Theory of graphs . . . . .	331
10-2 Maximal flows in networks; intuitive approach . . . . .	334
10-3 Maximal flows in networks; examples of the intuitive approach .	337
10-4 The labeling technique . . . . .	340
10-5 An example of the labeling process . . . . .	342
10-6 The matrix solution . . . . .	344
10-7 An example of the matrix solution . . . . .	346
10-8 Proofs . . . . .	349
10-9 A primal-dual algorithm for the transportation problem . . . . .	351
10-10 Summary of primal-dual algorithm . . . . .	357
10-11 The primal-dual algorithm; an example . . . . .	359
10-12 Personnel-assignment problems . . . . .	367
10-13 Transhipment problem . . . . .	368

<b>CHAPTER 11. SPECIAL TOPICS . . . . .</b>	<b>379</b>
11-1 Introduction . . . . .	379
11-2 Postoptimality problems . . . . .	379
11-3 Changing the price vector . . . . .	380
11-4 Changing the requirements vector . . . . .	382
11-5 Adding variables or constraints . . . . .	384
11-6 An example of parametric programming . . . . .	386
11-7 Upper and lower bounds . . . . .	387
11-8 The capacitated transportation problem . . . . .	395
11-9 Secondary constraints . . . . .	398
11-10 The decomposition principle for linear programs . . . . .	400
11-11 Summary of computational technique for the decomposition algorithm; an example . . . . .	405
11-12 Game theory and linear programming; introduction . . . . .	411
11-13 Reduction of a game to a linear programming problem . . . . .	415
11-14 Conversion of a linear programming problem to a game problem . . . . .	418
<b>CHAPTER 12. APPLICATIONS OF LINEAR PROGRAMMING TO INDUSTRIAL PROBLEMS . . . . .</b>	<b>429</b>
12-1 Introduction . . . . .	429
12-2 The standard transportation problem . . . . .	429
12-3 Production allocation and transportation . . . . .	431
12-4 A case study . . . . .	433
12-5 Machine-assignment problems . . . . .	437
12-6 Regular-time and overtime production . . . . .	439
12-7 Optimal product mix and activity levels . . . . .	447
12-8 Petroleum-refinery operations . . . . .	452
12-9 Blending problems . . . . .	458
<b>CHAPTER 13. APPLICATIONS OF LINEAR PROGRAMMING TO ECONOMIC THEORY . . . . .</b>	<b>476</b>
13-1 Introduction . . . . .	476
13-2 Theory of the firm; classical approach . . . . .	476
13-3 Linear programming and the firm . . . . .	481
13-4 Economic interpretation of dual linear programming problems . . . . .	483
13-5 Input-output analysis . . . . .	487
13-6 Prices in a Leontief system . . . . .	490
13-7 Other properties of the Leontief system . . . . .	492
13-8 The aggregation problem . . . . .	493
13-9 Decomposable systems . . . . .	495
13-10 The closed Leontief model . . . . .	499
13-11 Practical uses for input-output models . . . . .	501
13-12 Alternative activities . . . . .	501
13-13 Dynamic Leontief models . . . . .	504
<b>INDEX . . . . .</b>	<b>517</b>
